

Objectives of the Workshop at the EnviroInfo 2008 Conference in Lüneburg :

The objectives are to share experiences with ICT on the following topics related to risk management :

- technical, chemical risks at regional and transboundary cartographic issues
- risk modelling issues for factories, railways, highways, pipelines, maritime traffic
- disaster management and emergency response
- data processing related to risk management issues
- health and biological risks issues for humans and the environment
- aircraft crash risks on infrastructure

These fields are both related to the follow-up of legislation and management for local and regional authorities as well as for factories owners of SME's and of transnational companies.

Researchers and technicians from public and private sector are invited to communicate experiences and discuss the necessary strategies for methodological, technical and managerial improvements.

At this workshop 8-10 presentations of 15-20 minutes are envisaged. A goal of this workshop is to gather methods and good practices for research and legal enforcement with local, regional and transboundary ICT solutions. Link with other thematic meetings of this topic with Codata and ICA will also be discussed.
